

Due to the adjustment of iOS system permissions, you need to go to [Settings, General, VPN & Device Management] and trust the application file before you can open the application.

1. If you open the downloaded application and the following message appears, **please remember the file name with the red line.**

2. Then click **Settings, General, VPN & Device Management** in your device and find the file with the same name.

3. Click the file and **select "Trust"**, and then you can open the application normally.
